

1. On your Windows laptop or PC, open 'System Information' and take a screenshot showing your OS version, processor, and RAM details.

Viewing System Information in Windows

2. Download any official Linux distribution ISO (like Ubuntu or Fedora), and use Rufus or Balen Etcher to create a bootable USB drive for installation.

Hint: If you don't have a spare USB, use a virtual machine tool like VirtualBox to mount the ISO and start the installation process virtually.

Creating a Bootable USB Drive with a Linux ISO

Steps Performed

1. Downloaded an official Linux distribution ISO file (such as Ubuntu or Fedora) from the distribution's website.
2. Inserted a USB flash drive with sufficient storage capacity (at least 8 GB).
3. Downloaded and installed a bootable USB creation tool such as **Rufus** or **Balen Etcher**.
4. Opened the tool and selected the downloaded Linux ISO file.
5. Chose the USB drive as the target device.
6. Clicked **Start** (in Rufus) or **Flash** (in Balen Etcher) to create the bootable USB drive.
7. Waited for the process to complete successfully.
8. Safely ejected the USB drive.

Alternative Method Using VirtualBox

If a spare USB drive was not available:

1. Installed Oracle VirtualBox.
2. Created a new virtual machine.
3. Mounted the Linux ISO file as a virtual optical disk.
4. Started the virtual machine and began the Linux installation process virtually.

3. On a macOS device (or using a macOS virtual machine), open 'System Preferences' and change the desktop wallpaper, then adjust the system language to Hindi or Gujarati.

Hint: Find 'Language & Region' in System Preferences to add or change languages.

Changing Wallpaper and System Language on macOS

Steps Performed

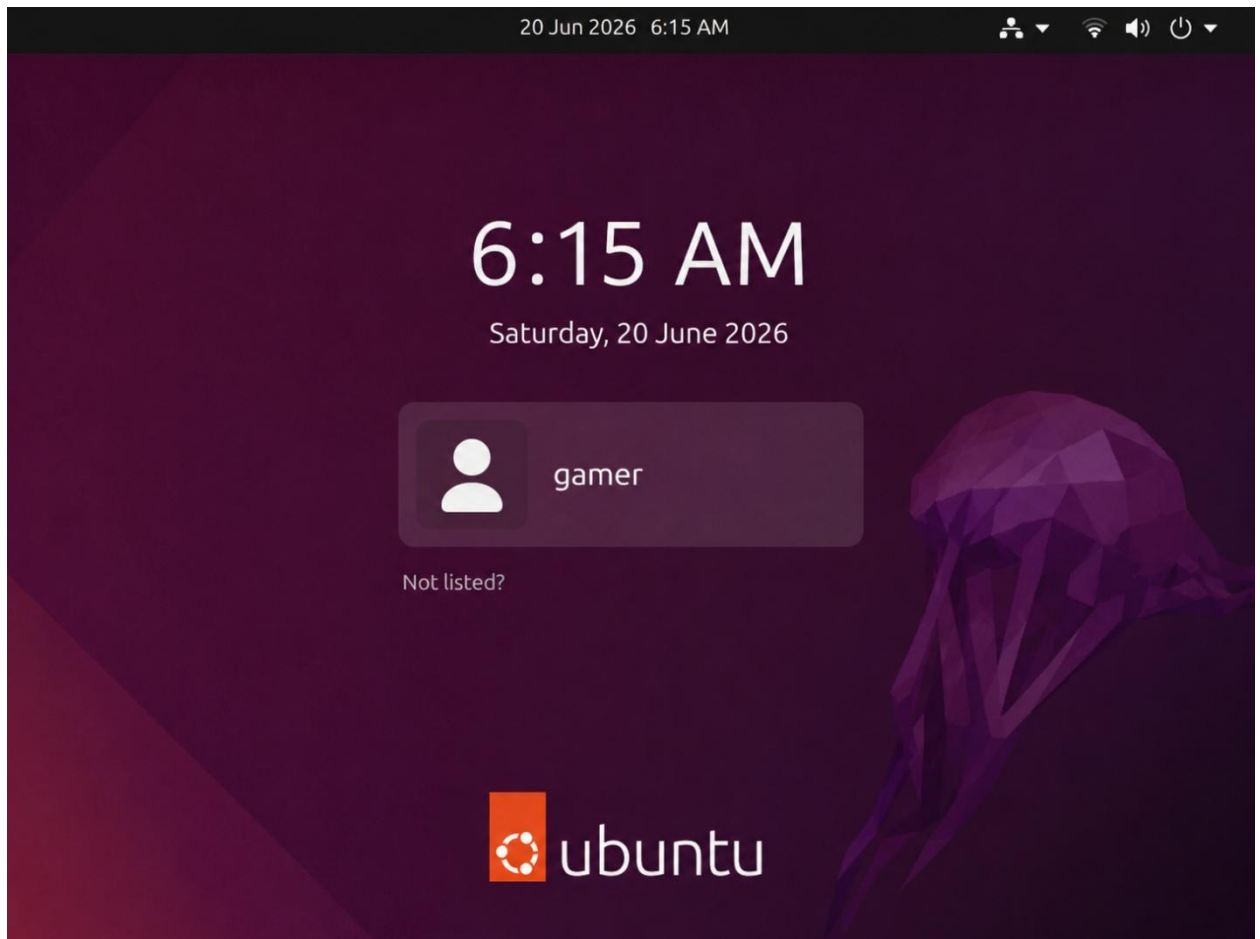

Changing the Desktop Wallpaper

1. Opened **System Preferences** (or **System Settings** on newer macOS versions).
2. Selected **Desktop & Screen Saver**.
3. Chose a new wallpaper from the available images or selected a custom picture.
4. Applied the new wallpaper.

Changing the System Language

1. Opened **System Preferences** and selected **Language & Region**.
2. Clicked the **+** (**Add**) button under the Preferred Languages list.
3. Selected **Hindi** or **Gujarati** from the list of languages.
4. Clicked **Add** and set it as the primary language.
5. Restarted the Mac or logged out and back in to apply the changes.

4. Install a fresh copy of Ubuntu Linux (real or virtual machine) and create a new user account named 'gamer'. After installation, enable automatic login for this user and take a screenshot of the login screen showing the username.

6. Use ChatGPT to generate a step-by-step guide for installing Windows 10 on a laptop, including partitioning tips and post-installation settings for privacy and updates. Follow the guide and note any steps that were unclear or missing.

Step-by-Step Guide for Installing Windows 10 on a Laptop

Step 1: Create Installation Media

- Download the Windows 10 ISO or Media Creation Tool from Microsoft.
- Create a bootable USB drive (8 GB or larger).

Step 2: Boot from the USB Drive

- Insert the USB drive into the laptop.
- Restart the laptop and enter the Boot Menu (F12, Esc, or another key depending on the manufacturer).
- Select the USB drive and start Windows Setup.

Step 3: Start Windows Setup

- Choose the language, time format, and keyboard layout.
- Click **Install Now**.

Step 4: Enter Product Key

- Enter the Windows 10 product key, or click **I don't have a product key** to activate later.

Step 5: Select Windows Edition

- Choose the appropriate edition (Home or Pro).
- Accept the license terms and click **Next**.

Step 6: Partition the Disk

- Select **Custom: Install Windows only (Advanced)**.
- Delete old partitions if performing a clean installation.
- Create a new partition for Windows.
- Windows will automatically create additional system partitions.
- Select the primary partition and click **Next**.

Partitioning Tips

- Allocate at least 100 GB for the Windows partition.
- Keep a separate partition for personal files if desired.
- Ensure important data is backed up before deleting partitions.

Step 7: Complete Installation

- Wait while Windows copies files and restarts several times.
- Set up the region, keyboard layout, and user account.

Step 8: Configure Privacy Settings

- Review location, diagnostic data, and advertising settings.
- Disable features you do not need to improve privacy.

Step 9: Install Updates

- Connect to the Internet.
- Open **Settings > Update & Security > Windows Update**.
- Download and install the latest updates.

Step 10: Install Drivers and Applications

- Install drivers for graphics, audio, Wi-Fi, and other hardware.
- Install essential software such as browsers and antivirus programs.

Steps That Were Unclear or Missing

- The guide did not explain how to identify the correct partition if multiple drives are present.
- Driver installation for specific laptop models may require downloading drivers from the manufacturer's website.
- The Boot Menu key varies by laptop manufacturer and may need to be checked beforehand.
