

1. Create a table listing 3 types of printers, 2 types of scanners, and 2 types of webcams, and for each, write one real-life use case (for example: 'Inkjet printer – printing college assignments').

Device Type	Specific Type	Real-Life Use Case
Printer	Inkjet Printer	Printing vibrant, high-quality family photos and color school projects at home.
	Laser Printer	Mass-producing crisp black-and-white text documents and invoices quickly in a busy office.
	Thermal Printer	Instantly printing receipts at a grocery store checkout lane or shipping labels for packages.
Scanner	Flatbed Scanner	Digitizing old, fragile family photo albums and delicate historical documents without damaging them.
	Sheet-fed (ADF) Scanner	Rapidly scanning a 50-page stack of corporate legal contracts into a single PDF file for digital archiving.
Webcam	Integrated Webcam	Joining a quick, casual Microsoft Teams or Zoom meeting from a laptop while working from home.
	External 4K Webcam	Streaming high-definition video gameplay on Twitch or recording professional online tutorials.

2. Draw a labeled diagram showing how a typical home printer connects to a laptop or PC, including the connection interface used (USB, Wi-Fi, or Bluetooth).

3. List three different connection interfaces (such as USB, Wi-Fi, Bluetooth) used by peripherals like printers, scanners, and webcams, and for each, name one advantage and one disadvantage.

Hint: Think about speed, convenience, and compatibility.

Connection Interface	Advantage	Disadvantage
USB	Provides fast and reliable data transfer.	Requires a cable, limiting mobility.
Wi-Fi	Allows wireless connection and can be used from multiple devices.	Connection speed may depend on network quality and can be affected by interference.
Bluetooth	Convenient for short-range wireless connections and does not require cables.	Slower data transfer speed and limited range compared to Wi-Fi.

Conclusion:

USB offers high speed and reliability, Wi-Fi provides flexibility and convenience, and Bluetooth is useful for short-range wireless connections but has lower speed and range.

4. Pick any one device you use at home or college (printer, scanner, or webcam). Write step-by-step instructions for how you would connect it to your computer, including what cable or wireless method you would use and any setup steps required.

Device Chosen: Printer

Connection Method:

USB Cable

Step-by-Step Instructions:

1. Place the printer near the computer and connect it to a power source.
2. Turn on the printer by pressing the power button.
3. Connect one end of the USB cable to the printer and the other end to the computer's USB port.
4. Wait for the computer to detect the printer automatically.
5. Install the printer driver using the CD provided with the printer or download the driver from the manufacturer's website.
6. Follow the on-screen instructions to complete the installation process.
7. Open **Settings > Devices > Printers & Scanners** and check whether the printer is listed.
8. Print a test page to confirm that the printer is connected and working properly.

Wireless Method (Wi-Fi):

1. Connect the printer to the same Wi-Fi network as the computer.
2. Open **Settings > Devices > Printers & Scanners**.
3. Click **Add a Printer or Scanner**.
4. Select the printer from the list and click **Add Device**.
5. Install any required drivers and print a test page to verify the connection.
